Personal Profile

My research interests mainly focus on Euclidean harmonic analysis, which can be divided into the following aspects:

(1) the property of Multilinear Fourier integral-type operators (Fourier integral operators, pseudo-differential operators, Fourier multipliers).

(2) sparse bounds and sharp weighted bounds of the important operators.

(3) multilinear extrapolation theory and multilinear dyadic representation theory.

(4) the singular integral operators and maximal operators along the curve.

(5) Boundedness extended to the weighted multi-exponents function spaces (weighted Besov spaces, weighted Triebel spaces, weighted Hardy spaces).

Education

2025.9–now	Master student – China University of Mining and Technology (Beijing) Advisor: Prof. Xinfeng Wu
2018.9–2022.6	Bachelor of Science – Southwest University of Science and Technology

Professional services

Referee for "Journal of Function Spaces" and "AIMS Mathematics".
