## Personal Profile

My research interests mainly focus on Euclidean harmonic analysis, which can be divided into the following aspects:

- (1) The property of Multilinear Fourier integral-type operators (Fourier integral operators, pseudo-differential operators, Fourier multipliers).
- (2) Sparse bounds and sharp weighted bounds of the important operators.
- (3) Multilinear extrapolation theory and multilinear dyadic representation theory.
- (4) The singular integral operators and maximal operators along the curve.
- (5) Boundedness extended to the weighted multi-exponent function spaces (weighted Besov spaces, weighted Triebel spaces, weighted Sobolev spaces).

## Education

**2025.9–now** Master student – China University of Mining and Technology (Beijing)  
Advisor: [Prof. Xinfeng Wu](#)

**2018.9–2022.6** Bachelor of Science – Southwest University of Science and Technology

## Professional services

Referee for "Journal of Function Spaces" and "AIMS Mathematics" in 2024.

## Publications
